

DETAILS:

Deepak Yadav (HTE@Cisco) | Vasai, Maharashtra, India | +91 9653130174 |
deepak.y.2812@gmail.com | www.linkedin.com/in/deepak-yadav-98534957

TECHNICAL SKILLS & EXPERIENCE MAP:

- Data Center & Ethernet Fabrics: EVPN, VXLAN, BGP, OSPF, IS-IS, Multipod, Multi-Site, Spreading Fabrics, Cisco Nexus (9K/7K/5K/3K), Arista EOS, Cisco NX-OS/IOS-XR, Vmware NSX-T, Linux Networking.
- Network Automation & NetDevOps: Infrastructure as Code (IaC), Ansible, Salt, Python, Git, CI/CD pipelines, REST APIs, XML, JSON, YAML frameworks.

Skills -

- Data Center & Networking: EVPN, VXLAN, BGP/OSPF/IS-IS, Cisco Nexus, Arista EOS, Cisco NX-OS/IOS-XR, VMware NSX-T, Linux networking, Cisco ACI (Single/Multi-Pod & Multi-Site).
- Automation & NetDevOps: Python, Ansible, Git, CI/CD, REST APIs, XML/JSON/YAML, Infrastructure as Code and network programmability.
- AI & Next-Gen Infrastructure: Cisco AI POD, Agentic AI, LLM/RAG concepts, AI infrastructure operations, NVIDIA Spectrum-X, SONiC, Cisco Hyperfabric.
- Cloud & Virtualization: AWS, Azure, GCP (basic–intermediate exposure), Nutanix HCI, VMware, hybrid and multi-cloud networking (Aviatrix).
- Security & Enterprise Networking: Check Point, Fortinet, Cisco ASA/Firepower, Cisco ISE, F5 LTM, SD-WAN, MPLS, routing/switching, DNA Center.
- HPC & Operations: HPC/AI cluster support, telemetry, packet analysis, log monitoring, RCA (Kepner-Tregoe), performance optimization at scale.
- Tools & Development: VS Code + Copilot, PyCharm, basic C/Python scripting, DevOps fundamentals, and automation-driven troubleshooting workflows.

PROFESSIONAL CERTIFICATIONS

- **NVIDIA-Certified Associate: AI Infrastructure and Operations - 2025**
- **Cisco Certified Specialist Data Center CORE - 2026**
- **Kepner-Tregoe Foundation** (Advanced Incident Management & Root Cause Analysis) – 2024
- **Cisco Certified Specialist – Data Center ACI Implementation – 2021**
- **Aviatrix Certified Engineer – Multi-Cloud Networking Associate – 2021**
- **CCIE Routing & Switching** (Written)-2016
- **Cisco Architecture Black Belt: Data Center ACI (Stage 2) | Enterprise SD-WAN (Stage 2) | DNA-Center (Stage 2) -2018-19**

PROFESSIONAL EXPERIENCE

Cisco Systems | *High Touch Engineer (HTE) – Data Center Infrastructure & Solutions*

Nov 2022– Present

- **Large-Scale Fabric Architecture & Inception:** Spearheaded the end-to-end design, provisioning, and deployment of a mission-critical **Multipod DC connectivity** solution for **YES Bank** to achieve massive traffic engineering throughput, low latency, and highly available multi-tenant topologies.
- **Full-Lifecycle Infrastructure Transformations:** Engineered and executed a comprehensive 1.5-year migration from legacy three-tier network infrastructure to an automated **Software-Defined Networking (SDN / Cisco ACI) fabric** for **HDFC Bank**, validating service availability and real-time performance at scale.
- **HPC-Scale Hardware Refreshes:** Directed a full-scale hardware and software migration for **Infosys**, orchestrating a complete ACI hardware refresh and fabric-wide upgrade across the production ecosystem with zero packet loss or downtime.
- **Face-to-the-Customer Engineering:** Serve as the dedicated High Touch Engineer and strategic advisor for premier technical accounts including **Cognizant (CTS)**, **TCSECP**, managing complex operations, scale refinement, and long-term network growth strategies.
- **Cluster Reliability & Incident Resolution:** Owned real-time monitoring, availability telemetry, and system health checks to proactively isolate network degradation; deployed directly to customer data centers for hands-on resolution of high-severity **P1/P2 outages**, minimizing MTTR.
- **Cross-Functional Feedback Loop:** Collaborated deeply with internal engineering and Cisco TAC product teams to open system bugs, document custom engineering workarounds, and feedback customer usability requirements into next-gen software designs.
- Customers - - Cognizant technology service, TCS ECP, Infosys, HDFC, YES Bank etc..

Accenture India Pvt. Ltd. | *Senior Network Engineer – Data Center & SDN Operations*

- Supported 24x7 operations of SAP's global Software-Defined Data Center (SDDC) infrastructure, managing network services across 20+ geographically distributed enterprise Data Centers built on Cisco ACI architecture.
- Administered and troubleshoot large-scale Cisco ACI environments spanning Single Pod, Stretch Pod, Multi-Pod, and Multi-Site deployments, ensuring high availability, scalability, and operational stability of mission-critical workloads.
- Led incident resolution and deep-dive troubleshooting for Data Center fabric, APIC controllers, Spine/Leaf switches, VXLAN EVPN overlays, VPC domains, endpoint learning, policy deployment, and routing-related issues.

- Executed complex infrastructure changes through ITSM and SAP Change Management processes, including APIC, Spine, Leaf, and IPN upgrades, hardware refreshes, fabric expansion, and network migrations with minimal business impact.
- Managed Layer 2 and Layer 3 Data Center networking services involving BGP, OSPF, VRF, VXLAN, MP-BGP EVPN, L2Out, L3Out, and external network integrations.
- Supported OpenStack-based cloud environments integrated with Cisco ACI, enabling tenant provisioning, network segmentation, and connectivity services for enterprise applications.
- Collaborated with global Data Center Engineering, Architecture, Security, and Cloud Operations teams to implement infrastructure enhancements, capacity expansion, and network modernization initiatives.
- Performed root cause analysis (RCA) and proactive remediation for recurring network incidents, improving service reliability, operational efficiency, and fabric health.
- Managed maintenance windows and production change activities for globally distributed Data Centers, ensuring compliance with operational standards and service-level objectives.
- Supported F5 load balancing infrastructure and security policy implementation, including virtual server modifications, pool management, traffic analysis, and access control changes.
- Utilized automation and scripting methodologies leveraging XML, REST APIs, and Cisco ACI programmability features to streamline operational tasks and reduce manual intervention.
- Monitored Data Center network performance, routing convergence, endpoint health, and policy consistency across multi-site environments to ensure optimal application connectivity.
- Participated in a global follow-the-sun support model, providing operational ownership for critical production environments and rapid response to high-priority incidents.
- Mentored junior engineers and served as a technical escalation point for Cisco ACI, Data Center networking, and SDN-related operational challenges.

Syndrome Technologies Pvt Ltd | Sr. Network & Security Consultant

Sep 2018 – Feb 2020

- **Next-Gen SDN Blueprints:** Designed Proof of Concepts (POC) and led enterprise deployments transitioning legacy enterprise environments to high-performance **Cisco ACI, Cisco DNA-Center, Cisco SD-WAN, and Arista SDN** systems.
- **Automotive Sector Implementations:** Planned and deployed Checkpoint Next-Generation Firewalls (Gaia R80.10) for KSPG Automotive Pvt Ltd, optimizing advanced traffic analysis, threat prevention rules, and micro-segmentation.
- Worked for Client ,ABJ,Kotek Mahindra ,Sun pHarma , Nihilant ,Sherkhan,Edelewise,KSPG,L&T,TCS etc.service and migration support

- Great opportunity to learn with multiple vendors and multiple high/low profile customers end in critical situation where we are on front of customer to answer if something went wrong and make it correct with help of team.

Capgemini India Pvt Ltd | Network Consultant

Nov 2016 – Aug 2018

- Troubleshoot and resolved network connectivity, switch port, VLAN, and Cisco ISE authentication issues involving TACACS+ and RADIUS services
- Supported WAN infrastructure operations, performing fault isolation, root cause analysis, and coordination with carriers and internal teams for service restoration
- Executed network device upgrades, security hardening activities, and configuration changes through automated and standardized deployment processes.
- Provided remote data center support for hardware replacement, device onboarding, configuration validation, and post-maintenance verification.
- Contributed to network transformation projects while balancing operational workload, supporting implementation, testing, and migration activities
- Supported internal IT teams across UK and Poland locations by diagnosing connectivity, authentication, and network infrastructure issues in a multi-site environment.

Reliance Jio Infocomm Ltd (RJIL) – 4G Core IP/MPLS, Data Center & Network Transformation Project

Senior Infrastructure Engineer | Mar 2014 – Nov 2016

(Representing SMSL Pvt. Ltd., Synophic Systems Pvt. Ltd. & TDS Management)

Data Center Infrastructure & Core Network Deployment

- Participated in the deployment and expansion of Jio's nationwide 4G Core IP/MPLS and Data Center infrastructure, supporting large-scale voice, data, and video services across 200+ network locations.
- Designed, configured, and integrated Cisco Nexus 7000/3000 series switching platforms in Data Center environments, supporting multi-tenant architectures using VPC, VDC, VLAN, and VRF technologies.
- Implemented Top-of-Rack (ToR) network architecture for rack and blade server environments, ensuring scalable and highly available Data Center connectivity.
- Performed integration and commissioning of Cisco ASR 9000 series routers and Nexus switches, supporting high-capacity 10G/40G/100G network deployments.

- Executed Data Center network migrations, link cutovers, traffic redistribution, and platform upgrades with minimal impact to production services.
- Collaborated with Cisco, Samsung, and multiple vendor teams during infrastructure deployment, testing, and handover activities.

Data Center Operations, Migration & Network Optimization

- Managed planned Data Center maintenance activities including IOS-XR, IOS-XE, and NX-OS upgrades, hardware replacements, and configuration standardization.
- Supported large-scale traffic migration activities involving Samsung EPC components (MME, SGW, PGW) and Cisco ASR/Nexus platforms to optimize network utilization and service availability.
- Performed end-to-end troubleshooting of Layer 2, Layer 3, MPLS, BGP, IS-IS, VRF, and IPv6-related issues within Data Center and Core Network environments.
- Conducted root cause analysis for hardware, software, and network performance issues, working closely with Cisco TAC and vendor support teams.
- Supported Data Center interconnectivity, core routing, and transport network operations, ensuring high network uptime and service continuity.
- Executed ATP validation, throughput testing, network acceptance testing, and operational readiness verification for newly deployed infrastructure.

Network Operations Center (NOC) & Service Assurance

- Monitored nationwide IP/MPLS, Metro Ethernet, OTN, and Access Network infrastructure using enterprise monitoring and fault management platforms.
- Performed proactive fault identification, alarm correlation, incident management, and service restoration activities to maintain network availability.
- Supported planned network events, ring closures, migration activities, and configuration changes across the transport and access network domains.
- Analyzed network performance, interface utilization, packet loss, CRC errors, and traffic flow patterns to identify and resolve service-impacting issues.
- Coordinated with Operations, Engineering, Transport, and Vendor teams to ensure timely incident resolution and seamless service delivery.
- Utilized tools including TeMIP, NNMi, HPSM, SNP, JCP, CNM, and SSH-based platforms for monitoring, troubleshooting, and operational management.

WOW Solutions Pvt. Ltd. – FTTX, IPTV & Smart Infrastructure Deployment Project (LODHA Group)

Network Engineer | Jun 2013 – Mar 2014

- Participated in the planning, deployment, and commissioning of large-scale Fiber-to-the-Home (FTTH) and Fiber-to-the-Building (FTTB) infrastructure for residential township projects developed by Lodha Group.
- Implemented and configured GPON-based network infrastructure, including OLTs, ONTs, and ONUs, to deliver high-speed broadband, IPTV, voice, and value-added services.
- Supported end-to-end deployment of Triple-Play services (Voice, Video, and Data) over fiber-optic networks, ensuring reliable service delivery to residential customers.
- Configured and integrated Layer 2 network devices, wireless access solutions, customer-premises equipment (CPE), routers, switches, and Wi-Fi infrastructure.
- Deployed and supported IP-based surveillance systems, including NVRs, IP cameras, PTZ cameras, and centralized monitoring platforms for residential security operations.
- Implemented smart building services over the IP network, including CCTV, Video Door Phone (VDP), E-Metering, Fire Alarm Systems, Lift Emergency Communication, and Access Control solutions.
- Configured and supported VoIP infrastructure, including PBX systems, intercom services, and enterprise voice communication platforms.
- Performed service activation, provisioning, testing, troubleshooting, and customer onboarding activities to ensure seamless network and service delivery.
- Collaborated with cross-functional teams during network rollout, acceptance testing, fault resolution, and project handover activities.
- Supported operations and maintenance activities by troubleshooting connectivity, voice, video, and security service issues across the fiber network infrastructure.

EDUCATION

- **Bachelor of Engineering (B.E.)** in Electronics & Telecommunication | *Pune University (S.R.E.S)* | **2012**
- **Diploma** in Electronics & Telecommunication | *Maharashtra Board (K.V.M.I.T)* | **2009**
- **CCIE DC -In progress**
